I. OPEN DISASTERS/EMERGENCIES:

II. WEATHER:

Northern California – Today through Tuesday, the forecast area will be sunny and mild with patchy morning fog. On Thursday, the area will be cooler with a chance of showers.

Southern California – Offshore flow and high pressure aloft will continue to bring warm and dry conditions through Tuesday. A trough of low pressure approaching the west coast for the latter half of the week will bring a cool, cloudy, and unsettled weather pattern with a chance of rain and mountain snow. Gusty offshore winds and warmer temperatures may return for next weekend.

State Weather Map

III. FIRES:

Overall Fire Risk:

Northern California

Unusual for this time of year, widespread drying of dead and dormant fuels will continue. As a result, lower elevations, especially in the southern end of the geographic area, are still unseasonably vulnerable to wildfire occurrence when any north to northeast or offshore winds develop such as those expected later this week.

Southern California

Light initial attack activity (IA) will be possible across the region through Tuesday due to well above normal temperatures along with humidity in the single digits and teens. Any ignition will most likely remain small due to a lack of widespread strong winds. There will be little or no fire activity across the region Wednesday and Thursday as temperatures cool and humidity increases. Showers with light wetting rains will occur Thursday causing the dead and fine fuels to become moister. Offshore winds will quickly dry out the dead and fine fuels once again Friday through this weekend, but little fire activity is anticipated at this time.
